

## Jennings Randolph International Fellowship Program Funded through Eisenhower World Affairs Institute

### APWA JENNINGS RANDOLPH FELLOWS

2004: **George Crombie** studied techniques and policies being used to manage solid waste in the Slovak and Czech Republics.

2004: **Brad Kutzner** studied techniques and policies of public works efforts in the Slovak and Czech Republics.

2004: **Jose Gamboa** studied ISO Certifications in Public Works in Mexico.

2005: **Larry Lux** studied the disaster preparedness, response, and recovery methods currently used in Australia for natural and man-made disasters, with a focus on the public works role in terrorism.

2005: **Brian Pettet** studied involvement practices of public works in the land development application and approval process, also methods and tools that are used by public works agencies to mitigate the cost of development on public infrastructure in Australia.

2006: **Patricia Bugas Schramm** studied asset risk assessment and stakeholder tradeoffs in New Zealand.

2006: **Julio Fuentes** studied transportation innovations in the United States and Mexico.

2006: **John Lisenko** studied the provision of public works infrastructure for suburban development in the Slovak and Czech Republics.

2006: **Tammy Qualls** studied sewer collection systems in various parts of Mexico.

2007: **Willard Bruce** studied waste management and waste disposal legislation, regulation, and practices in the Slovak & Czech Republics, and identified management practices that would be transferable from our systems to theirs.

2007: **Paul Hindman** studied how the Slovak and Czech public works professionals have managed floods and how they have protected their citizens and property.

2007: **Keith Reester** studied how Australia is building the future workforce: replacing baby boomers in the public works arena.

2007: **Jim Close** studied organic recycling in Australia.

2008: **Tricia Aragon** studied the public works role in mitigating construction impacts of private development in New Zealand.

2009: **Catherine Chertudi** studied water conservation and management practices in Australia to learn how the country has addressed limited supplies and impacts of drought, growth, or overuse and contamination in providing safe and adequate water for needed municipal, industrial, and agricultural uses in Australia.

2009: **Mark Whitfield** studied the removal and composting of organic waste from the municipal solid waste stream in the Czech Republic.

2010: **John Daly** synthesized a strategy based upon usRAP and asset management information that would, through the development and execution of a local public and information plan, get the public, particularly in rural areas in Mexico, “more engaged” in roadway safety.

2010: **David Zelenok** studied the status of traffic and transportation system design and management throughout New Zealand.

2011: **Ram Tewari** – visited the Czech Republic to study waste management and to evaluate transferability of successful waste management programs in the Republics, European Union, and the US.

2011: **Dan Hartman** studied in Australia gathering and sharing information how new applications, social media and smart phone technology can improve communication, notification, and reduce to make cities more responsive and more efficient.

2011: **Greg Chartier** studied in Australia to evaluate the state of practice in developing sustainable infrastructure plans based on triple bottom line, and assess the suitability of the Australian National Asset Management (NAMS.PLUS) training and certification programs for building asset management capacity in North America.

2011: **Tyler Palmer visited Mexico to study** methods and materials are used to design, build and most importantly maintain streets with limited resources in an effort to see how we can enhance our ability to see alternatives to established norms.
