

Stormwater Management Workshop

Cost: Members: \$550.00
Non Members: \$650.00

2 Day Workshop for Public Works and Stormwater Management Professionals

Whether your community is large or small, it is usually the public works agency that is on the front lines -- stepping up to the serious challenge of managing stormwater runoff and keeping contaminants out of the clean water supply. In setting up a stormwater management program, public works professionals and community leaders must consider measures to deal with both water quantity (flooding) and water quality (pollution prevention.)

Demands for new development (and more impervious surfaces), repairing and replacing aging infrastructure, meeting regulatory requirements, and tight budgets are all contributing factors to the pressures faced by public agencies seeking a comprehensive approach to stormwater management.

This 2 day workshop will provide you the tools to accomplish that comprehensive approach.

Join us to explore the essentials of establishing a stormwater management program that can weather any storm – a program that can evolve to meet changes in management methods and philosophies, technological advances, innovations in best management practices, population growth, new regulatory requirements, and turnover in elected and appointed officials.

Engage in this opportunity to meet APWA's stormwater experts, get tips on simple and effective practices, and network with other professionals charged with making decisions and implementing solutions that will affect water quality for generations to come.

Earn CEUs and PDHS from the best instructors in the stormwater management industry!
